

## *Optical Network Solutions* position you for tomorrow

Make sure you choose the right options for your fiber network today—and are prepared for what your customers will demand tomorrow. Let CCI Systems guide you to the right solution.

### **Expert, candid assessment**

Our engineers help you evaluate your options, whatever your goals: increasing bandwidth, adding fiber, expanding geographical coverage. We assess your current network, taking into account your objectives, budget and other considerations, then offer practical recommendations.

### **Cisco expertise**

As a Cisco Systems Service Provider Technology Partner, CCI offers specialized expertise in the needs of service providers. You benefit immediately from knowledgeable professionals who understand your industry and your challenges, and who can point you toward new opportunities.

### **Integration and flexibility**

Work with our team to explore technologies from multiple industry partners, such as next-generation DWDM, Carrier Ethernet, SONET and more. We integrate these with best-in-class core IP, video and network solutions, using best-practice design and implementation. You gain a highly functional, flexible network.

### **Start-to-finish capabilities**

Only CCI offers you true end-to-end service:

- Establishing objectives
- Creating a logical design that meets your network requirements
- Integrating with your existing network, accommodating any constraints
- Testing and hands-on training that starts in the design phase

At every phase, our real-world experience smooths the path of your project.

### **Vital assessments**

Ensure your existing fiber can handle increased data speeds with chromatic and polarization mode dispersion present. CCI has the equipment and expertise to test and identify any problem areas in your network. You get comprehensive documentation that gives you the foundation for making good decisions. We can also document your system as-built to ensure you make full use of its capabilities.

### **Make one call—to CCI**

We've been building fiber networks ever since fiber was introduced in the broadband industry. And we're ready to help you with every aspect of your optical network. Call today for details: 855-337-9299.
