

Let pros who know both sides integrate your IP and RF plant

Bring together IP routing and switching with your RF cable plant smoothly and easily, relying on expert guidance from CCI. For our integration professionals, connecting CMTS hardware to RF cable plant is second nature...helping you achieve hassle-free cable modem deployments.

We support your business model with:

- DOCSIS 3.0 migration
- Virtual node splits
- Load balancing
- Video over DOCSIS (VDOC)
- Subscriber provisioning and management

Unique insight streamlines integration

You benefit from CCI's expertise in OSP design and construction, as well as our in-depth knowledge of IP routing and switching. It's a unique combination that perfectly positions you to launch cutting-edge services.

Start-to-finish solutions yield faster results

Speed installation and integration with single-source convenience.

- CCI evaluates the existing combining network and alerts you to any potential flaws or impairments.
- Our team not only installs and configures your CMTS, but also helps you identify and balance any RF issues—going beyond the point product to address the entire solution and achieve optimal performance.
- And with CCI hosted NOC services, you enjoy ongoing technical support for your subscribers and your network.

Cisco expertise benefits your cable network

CCI is one of the few **Cisco** Systems partners certified to design, sell and install **Cisco's** entire line of CMTS products, along with all the surrounding components. You benefit from our early access to new products and technologies.

Make one call—to CCI

Put CCI's CMTS experience to work for your cable operation, and offer cutting-edge voice and data services over coaxial cable. Call today: 855-337-9299.

Complete CMTS solutions start here

Choose CCI for...

- Design
