

## Stay competitive with an affordable bandwidth increase

You may not be able to afford an 870MHz or 1GHz upgrade—but your system can still compete with satellite dish, DSL and other providers. Let CCI help you increase bandwidth at a fraction of the cost of a complete overhaul.

### **Add just enough to increase revenue**

CCI evaluates your system to find the best, most economical way to create just enough bandwidth for advanced services. We maximize use of your existing taps, splitters, cable and even amplifier housings. We build in only the bandwidth you need for a digital tier and high-speed data, helping you minimize construction and materials costs while increasing revenue.

### **Streamline your project with one-stop convenience**

Simplify project management with CCI's start-to-finish solution: initial evaluation, system design, material supply, construction and activation.

Count on our experienced field and applications engineers to:

- Determine upgrade suitability with an initial system survey
- Evaluate all plant equipment for compatibility
- Select system equipment based on compatibility, cost, performance and ease of installation
- Install and set up digital and CMTS equipment in your headend
- Provide amplifier and hardware solutions
- Sweep and certify your entire plant to ensure a successful rollout

### **Avoid hassles with a complete solution**

Rather than simply swapping modules, which can lead to ongoing maintenance headaches, CCI addresses your entire system.

- Verify the full system design for proper forward and return signal levels at the taps
- Provide complete digital maps (AutoCAD, Bentley, or GIS) that detail your plant
- Include unique construction notes to streamline the upgrade, and a BOM detailing all equipment needed to complete the project
- Calculate end-of-line noise and distortion, to get the most reach out of your amplifiers while meeting minimum end-of-line performance requirements

In short, you get the solution you need today, with an eye toward what you'll need tomorrow.

### **Make one call—to CCI**

Join small cable systems all over the country who've upgraded affordably and effectively with CCI. Call to talk with us about your system: 855-337-9299.
